Head cover	<input type="checkbox"/>				
Arm covers	Fitted <input type="checkbox"/>	Not Fitted <input type="checkbox"/>			
Velcro head & arm covers	<input type="checkbox"/>				

## Barwon & Hudson – A: Tips

### Seat Height:

Reduction in seat height on an A chair is limited due to the size of the mechanism in the chair. Some seat height reduction can be achieved by:

- Changing to a Mini base size (-20mm)
- Removal of castors completely (-30mm)
- Reduction in seat foam (-20mm) Note: this will void seat foam warranty.
- Max total seat height reduction: -50mm

### Castors:

- Standard castors are not suitable for moving with the client seated, B24 kit or 75mm castors are required for this. 75mm castor will raise the seat height by 25mm
- B24 Wheel kits include a rear locking brake pedal, push handle and 24V battery backup.
- The no castor option can be done in our factory or on site to make it easier to move into the client's house. Please indicate the clients preferred option in notes.

### General modification notes:

- Gluteal recess: this is a carved-out section in the lower backrest foam for clients with a gluteal region that stops their back from getting adequate contact and support from the chair.
- Battery backup: as standard the single and dual motor chair come with a 9V battery backup capable of lifting the client out of the chair in an emergency. 24V full battery backup will allow the client to use their chair all day without being connected to power.
- Leg rest side walls: a small lip on both sides of the foot rest for clients who have issues with their legs falling off the side of the footrest while reclined.
- Fabric: any fabric can be used on the Hudson chair, contact our office if you require a sample book. Two different fabrics can also be used on one chair i.e. Fusion antibacterial 4-way stretch fabric on contact areas with a hard-wearing Oscar dot on the back and sides.

### Additional Notes:
