

### Why Oscar Furniture?

Oscar have decades of experience in manufacturing furniture.

Anthony Op de Coul built the business with his father Leo and carries on a proud family tradition of quality without compromise.

### Australian Made

All M5 lift chairs are made in Horsham, Australia. The super-strong chassis and mechanism is the result of Oscar's own research and development, and is unique to the Oscar M5 Bariatric chair. Expert upholsterers assemble each chair to exacting standards using only quality materials.

The footrest and backrest are independently adjustable. The backrest can be reclined to almost flat, making the M5 comfortable for hours of undisturbed sleep. Sturdy armrests give security against rolling out of the chair.

The backrest angle can be adjusted separately to the seat and footrest, relieving pressure on the back of the thighs. This is important to maintain good circulation to the lower limbs.

When the chair is raised to assist standing, the backrest can be reclined to prevent pressure on the client's upper body allowing a comfortable transition into and out of the chair.

Hidden beneath the surface of the upholstered arms lies a strong frame that will support the client during sitting and standing.

### Triple action Linak motor control

The Oscar M5 has been built with 4 commercial grade electric motors that allow separate control of the backrest, lift and footrest. This means that you can adjust the chair into exactly the right combination of backrest angle, seat height and footrest height for your best comfort. The controller is unique to the M5 with large symbols, 'press & hold' buttons and a handy "Home" function that returns all chair adjustments back to rest.

### Why choose the M5 bariatric lift chair?

**The M5 can seat lift 320kgs and footrest lifts 75kgs**

Off-the-shelf lift chairs typically have only one electric motor that combines lift with recline and footrest functions. The M5 Bariatric chair has four heavy-duty Linak® electric motors and is designed to lift 250% more than a standard lift chair. The M5 lift mechanism is made in Australia and is exclusive to the Oscar M5 Bariatric chair. The mechanism has been tested through many thousands of lift cycles to ensure smooth, quiet operation with reliable long-term performance.

### Customise your chair

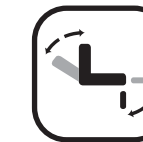

The Oscar M5 has a 24 volt battery back-up system allowing the chair to operate during power failures. This prevents the client being caught in a reclined position, which can be dangerous for clients as well as their carers.

Head roll and centre back roll are reversible, allowing clients a quick method of changing the backrest support.

#### Action:

**Lift Assist**

**Dual Action**
